

The tes-timonial

Directed Heat Drying™

September 2008

TES-timonial: John Thompson, Alltec Network, England

Hello from across the pond;

Our building styles (England) vary considerable from most of yours but there's nothing like getting concrete slab dry in 4 days when the customer has been trying for weeks.

I've been in the restoration industry for more years than I care to remember and when I attended the TES class last year I gave young Mr. Reets and the TES unit a thorough going over, glad to say it's the best units I have used for many years. It is everything they say about it.

Our first application of TES was at a school in Hull that had suffered rain water ingress during the flooding in July 2007. Up to 4 TES units were deployed at the school, sometimes working together and sometimes separately. Overall the school buildings covered 50,000 sq. mtrs including 2 gyms. The 4 TES units were set up to dry the first of 17 blocks. Each block consists of 5 classrooms, connecting corridors, 2 toilet blocks and 2 stair wells. TES was installed with initial readings showing the floor at between 999 and 750 REL and with humidity readings in excess of 95%RH. Following 48 hrs readings showed readings down to 176- 240 REL and 65%RH.

Compared with "conventional" drying systems, TES showed the foors and walls were in an acceptable condition, 14 to 18 days prior to what would have been expected.

TES-timonial: Derek Preece, On the Spot Cleaning & Restoration, Blackfoot, ID

By far, the most impressive benefit of using TES, is the speed in which it dries.

We are getting our customers homes dry two or three times faster than before we started using TES. We took all the classes and pioneered top-down drying in our area, but we constantly had problems with the customers turning off the fans and dehumidifiers after a few days because of the constant noise. TES is so quiet and fast that this doesn't happen on jobs with TES.

What's New with TES?

USETES.MOBI is a web site designed for web capable cell phones and PDAs.

We've provided you with calculators that give you the ability to find out everything from evaporation potential to electrical useage costs. You can access this information in the field, without having to stop and do the math yourself.

For more information about these calculators, you can visit us on the web at <http://www.tesdryingsystem.com/usetesmobi.html>

We have tested the calculators on many brands and types of devices, however, we can not guarantee that it will work on yours.

Products & Accessories

Injectidry Floor Drying System

Injectidry's High Pressure Floor Drying Package is designed specifically for floor drying. This set-up is extremely quick, easy and efficient for your typical floor drying needs.

\$2995.00

Octi-Dry for TES

Octi-Dry works so quickly that in most cases you can avoid major disruption of the customer's home or business. Octi-Dry forces warm air through the wall structure, directing it where it is needed most. This results in faster and more thorough structural drying.

\$349.00

HygroTrac Sensing System

The HygroTrac system offers constant real-time remote job site monitoring. Temperature and humidity data for affected areas and material moisture levels can be transmitted from the job site and monitored remotely from any web browser. Receive instant alarms by automatic email and/or text message if critical temperature or humidity levels thresholds are reached.
